FLOW KEY

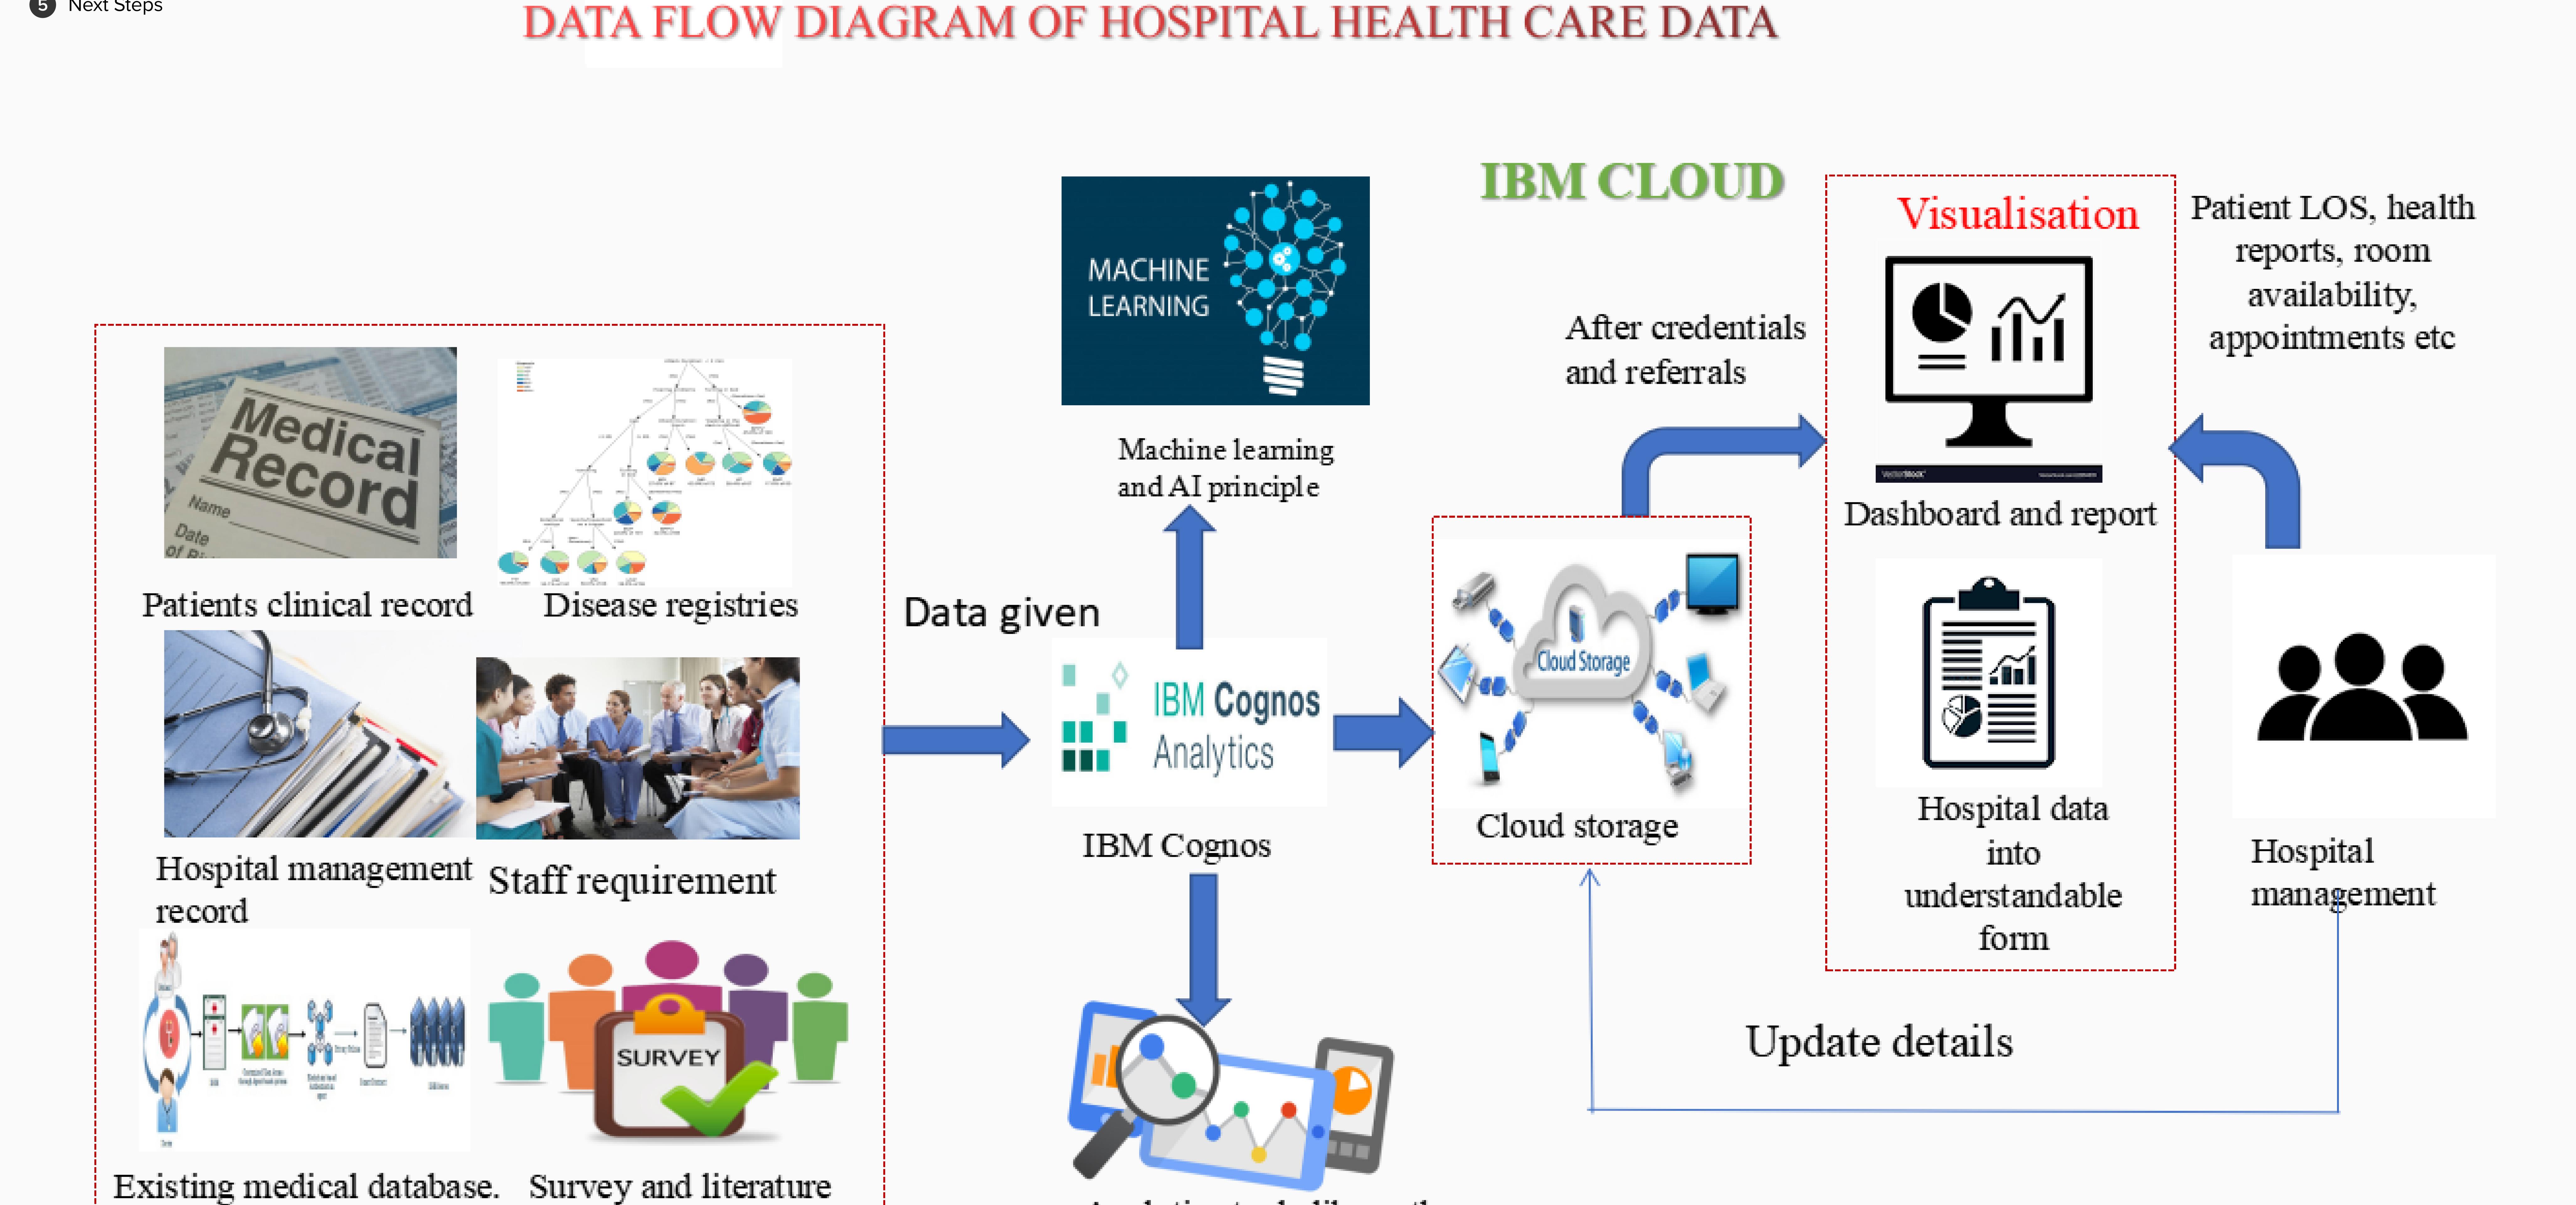

This small rectangle is used for data that is required frequently or is produced in the process.

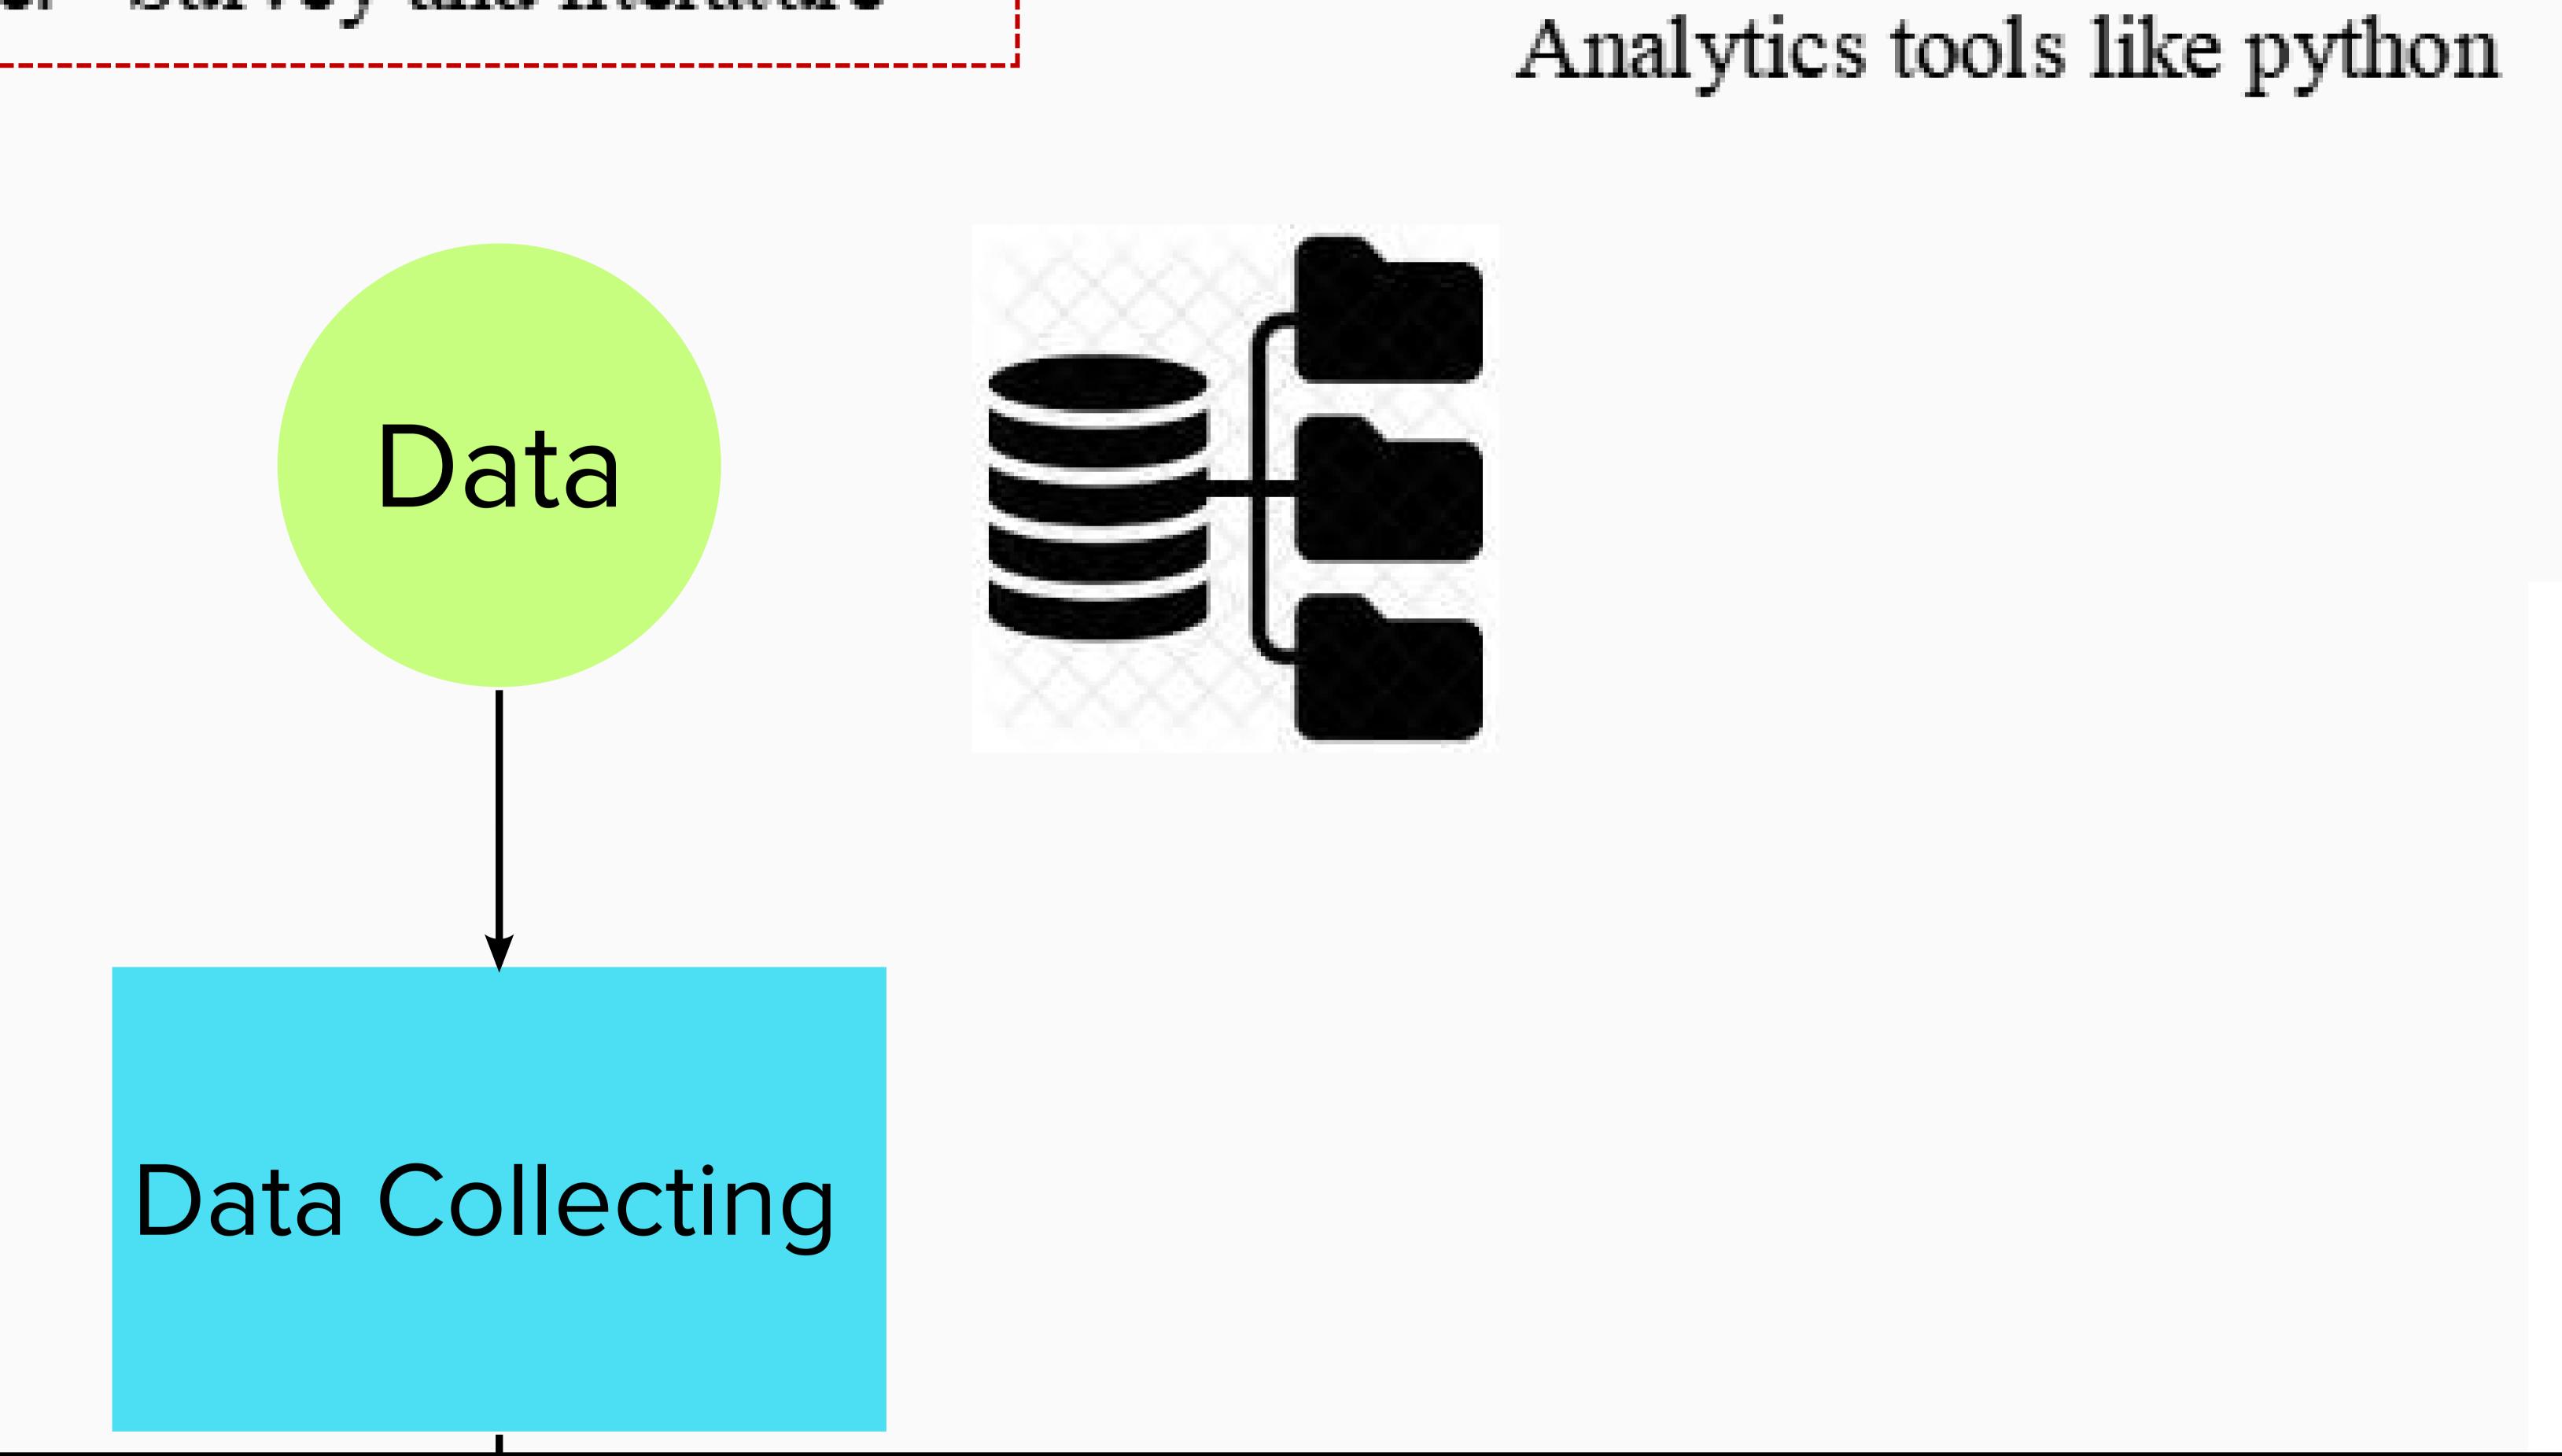

It is where data comes from or goes to. It is external to the process.

Connects elements of the flow.

This shape is used for actions or instructions, the things that must be done.

- Data is collected through various data sets.
- This collected data is integrated and preprocessed.

Selecting the features required which faccinate the users

- After preprocessing the data it is formed into matrix which will be easy to extract.
- Extracting data the data is normalized which helps the user to understand the data.

MURAL TEMPLATE

Visualize data flows and behaviors

to explain complex processes

Data Flow
